- D. If proposed development activity would require one or more State permits, then State agencies are encouraged to identify any affected Rare, Threatened or Endangered Species habitats on the State of Maryland list, and to work cooperatively with property-owners to minimize impacts on such habitats.

If any new principal commercial or industrial use is developed directly adjacent to or directly across the street from a residential use in a residential district, and such use is visible from such residence, then a substantial landscaped buffer shall be provided alongside the edge of the commercial or industrial use.
 - 1. A substantial landscaped buffer shall also be provided along the edge of a storage area if new or expanded outdoor commercial or industrial storage of machinery, equipment, materials or "junk" is visible from a public street or dwelling.
 - 2. Such landscaping shall primarily include evergreen trees and shrubs within an initial height of 3 feet. Such landscaping shall include choices of species and locations so that it can reasonably be expected that a mostly solid visual screen 6 feet in height will result within 5 years.
 - 3. Screening shall not be required at driveway crossings or where it would obstruct safe sight distances.
- B. A landscaped buffer shall not be required along a front yard, except to buffer an outdoor storage area. A landscaped buffer shall not be required where existing vegetation will serve the same purposes, and there is a legal commitment to preserve such vegetation.
- C. The Zoning Administrator may permit a landscaped buffer to be replaced by an attractive mostly solid weather-resistant fence made of wood or materials with a similar appearance or brick or other decorative masonry if the applicant proves good cause in writing for such substitution. Such fence shall have a minimum height of 6 feet. The Zoning Administrator may base his/her decision upon a review by the Planning Commission or Town Council.
- D. The Mayor and Town Council may waive any fencing or buffer where the applicant proves such features would not serve any valid purpose, or is unneeded because of major changes in elevation or similar features.

518 **HOME OCCUPATIONS**

- A. The Town recognizes the desire and/or need of some citizens to use their residences for business activities in order to reduce travel and provide another economic development tool, but also recognizes the need to protect the surrounding areas from adverse impacts generated by these business activities. The standards in this section are intended to ensure that the home occupation use remains subordinate to the residential use, and that the residential character of the dwelling unit is maintained. The standards recognize that many types of jobs can be performed in a home with little or no effect on the surrounding neighborhood.
- B. Home Occupations are permitted by district, as specified in Article 4.
- C. Permitted Home Occupations: Examples of permitted home occupations include, but are not necessarily limited to, the following:
 - 1. Offices for such professionals as but not limited to, architects, brokers, counselors, clergy, doctors, draftspersons and cartographers, engineers, land planners, insurance agents, lawyers, real estate agents, accountants, editors, publishers, journalists, physiologists, contract management, graphic design, construction contractors, landscape design, cleaning services, salespersons, manufacturer's representatives, and travel agents.
 - 2. Instructional services, including music, dance, art, and craft classes.

3. Produce grown on premise and for sale at home.
4. Studios for artists, sculptors, photographers, and authors.
5. Workroom for tailors, dressmakers, milliners, and craft persons, including weaving, jewelry making, cabinetry, and woodworking.
6. Home salon for services providing hair cutting, massage, or other cosmetology services.

D. **Standards.** Home Occupations shall comply with the standards listed below:

1. Operational Standards

- a) A *home occupation* shall have no more than one (1) nonresident employee on premises at any one time. The number of nonresident employees working at locations other than the site of the *home occupation* is not limited. One (1) parking space shall be provided for the nonresident employee.
- b) The *home occupation* shall be limited to the parking storage of one (1) commercial vehicle on the premises, not exceeding a 10,000 pound gross vehicle weight.

2. Site Related Standards

- a) Appearance of structure and site. The dwelling and site must remain residential in appearance and characteristics. With the exception of signage which complies with Article 7 of the Zoning Ordinance or changes which are expressly contemplated under the terms of this Part, external changes to the dwelling where the *home occupation* is conducted which make it appear less residential in nature or function are prohibited.
 1. Any structures used for the outdoor display of any goods, stock in trade or other commodities must be temporary in nature and must be removed nightly between the hours of 9p.m. and 7a.m. in such a manner as is discernible from other dwellings.
 3. The use shall involve no more than 25% of the *total floor area* of the *dwelling unit* in which the *home occupation* is located. If the *home occupation* is located in an *accessory structure*, the use shall involve no more than 25% of the combined total floor area of the dwelling unit and accessory structure. Notwithstanding the foregoing, in no instance shall a *home occupation* occupy a total of more than 500 square feet of gross floor area.
 4. Hours: A *home occupation* shall not operate between the hours of 9p.m. and 7a.m. in such a manner as is discernible from other dwellings.

519 SOLAR POWER

As solar energy system components have become more efficient and less costly an increasing number of solar energy installations have been installed in Maryland. Since 2005, the interest in solar energy has rapidly increased such that many communities have had to address solar installations as a land use issue. Solar energy components continue to improve in efficiency and decline in price. Solar is already a cost-competitive option in some locations.

Solar energy offers retail customers an alternative (or supplement) to utility power. Solar energy has become a symbol of energy self-sufficiency and environmental sustainability. The growth in solar

installations is attributable more to the non-economic benefits than as an economic substitute to the utility. Households and businesses wanting to reduce their carbon footprint see solar energy as a strong complement to energy efficiency. Volatility in natural gas or propane prices makes free solar fuel look attractive as a price hedge.

A. Principal and accessory uses

This ordinance addresses solar energy as both a principal use and as an accessory use to the primary residential or commercial use. Counties and rural areas are much more likely to see “solar farms” or ground-mounted “community solar” installations. These solar installations are large arrays of hundreds or thousands of ground or pole-mounted panels covering anywhere from a few acres to over 100 acres. These land uses have different issues and need to be addressed in a substantially different manner than discussed in this ordinance.

B. Scope - This article applies to all solar energy installations in the Town of Friendsville.

C. Purpose - Consistent with the Friendsville Comprehensive Plan, the intent of this Section is to allow reasonable capture and use, by households, businesses, and property owners, of their solar energy resource, and encourage the development of renewable energy businesses, consistent with community development standards. The Town of Friendsville has adopted this ordinance for the following purposes:

1. **Comprehensive Plan Goals** - To meet the goals of the Comprehensive Plan and preserve the health, safety and welfare of the Town’s citizens by promoting the safe, effective and efficient use of active solar energy systems installed to reduce the on-site consumption of fossil fuels or utility-supplied electric energy. The following solar energy standards specifically implement the following goals from the Comprehensive Plan:

Goal 1 - Encourage the use of local renewable energy resources.

Goal 2 - Promote sustainable building design and management practices in residential, commercial, and industrial buildings to serve the needs of current and future generations.

Goal 3- Assist local businesses to lower financial and regulatory risks and improve their economic, Town, and environmental sustainability.

Goal 4 - Efficiently invest in and manage public infrastructure systems to support development and growth.

D. Definitions

1. **Building-integrated Solar Energy Systems** - An active solar energy system that is an integral part of a principal or accessory building, rather than a separate mechanical device, replacing or substituting for an architectural or structural component of the building. Building-integrated systems include but are not limited to photovoltaic or hot water solar energy systems that are contained within roofing materials, windows, skylights, and awnings.
2. **Community Solar** - A solar-electric (photovoltaic) array that provides retail electric power (or a financial proxy for retail power) to multiple community members or businesses residing or located off-site from the location of the solar energy system. A community solar system may be either an accessory or a principal use.
3. **Grid-intertie Solar Energy System** - A photovoltaic solar energy system that is connected to an electric circuit served by an electric utility company.

4. Off-grid Solar Energy System - A photovoltaic solar energy system in which the circuits energized by the solar energy system are not electrically connected in any way to electric circuits that are served by an electric utility company.
5. Passive Solar Energy System - A solar energy system that captures solar light or heat without transforming it to another form of energy or transferring the energy via a heat exchanger.
6. Photovoltaic System - A solar energy system that converts solar energy directly into electricity.
7. Renewable Energy Easement, Solar Energy Easement - An easement that limits the height or location, or both, of permissible development on the burdened land in terms of a structure or vegetation, or both, or the purpose of providing access for the benefited land to wind or sunlight passing over the burdened land.
8. Renewable Energy System - A solar energy or wind energy system. Renewable energy systems do not include passive systems that serve a dual function, such as a greenhouse or window.
9. Roof Pitch - The final exterior slope of a building roof calculated by the rise over the run, typically but not exclusively expressed in twelfths such as 3/12, 9/12, 12/12.
10. Solar Access - Unobstructed access to the solar resource (see definition below) on a lot or building, including access across adjacent parcel air rights, for the purpose of capturing direct sunlight to operate a solar energy system.
11. Solar Resource - A view of the sun from a specific point on a lot or building that is not obscured by any vegetation, building, or object for a minimum of four hours between the hours of 9:00 AM and 3:00 PM Standard time on any day of the year.
12. Solar Collector - A device, structure or a part of a device or structure for which the primary purpose is to transform solar radiant energy into thermal, mechanical, chemical, or electrical energy.
13. Solar Collector Surface - Any part of a solar collector that absorbs solar energy for use in the collector's energy transformation process. Collector surface does not include frames, supports and mounting hardware.
14. Solar Daylighting - A device specifically designed to capture and redirect the visible portion of the solar spectrum, while controlling the infrared portion, for use in illuminating interior building spaces in lieu of artificial lighting.
15. Solar Energy - Radiant energy received from the sun that can be collected in the form of heat or light by a solar collector.
16. Solar Energy Device - A system or series of mechanisms designed primarily to provide heating, cooling, electrical power, mechanical power, solar daylighting or to provide any combination of the foregoing by means of collecting and transferring solar generated energy into such uses either by active or passive means. Such systems may also have the capability of storing such energy for future utilization. Passive solar energy systems are designed as a solar energy device, such as a trombe wall, and not merely a part of a normal structure such as a window.
17. Solar Energy System - A device or structural design feature, a substantial purpose of which is to provide for the collection, storage and distribution of sunlight for space heating or cooling, generation of electricity, water heating, or providing daylight for interior lighting.

18. Solar Farm - A commercial facility that converts sunlight into electricity, whether by photovoltaics (PV), concentrating solar thermal devices (CST), or other conversion technology, for the primary purpose of wholesale sales of generated electricity. A solar farm is the principal land use for the parcel on which it is located.
19. Solar Heat Exchanger - A component of a solar energy device that is used to transfer heat from one substance to another, either liquid or gas.
20. Solar Hot Air System - An active solar energy system that includes a solar collector to provide direct
21. supplemental space heating by heating and re-circulating conditioned building air. The most efficient
22. performance typically uses a vertically mounted collector on a south-facing wall.
23. Solar Hot Water System (also referred to as Solar Thermal) - A system that includes a solar collector and a heat exchanger that heats or preheats water for building heating systems or other hot water needs, including residential domestic hot water and hot water for commercial processes.
24. Solar Mounting Devices - Racking, frames, or other devices that allow the mounting of a solar collector onto a roof surface or the ground.
25. Solar Storage Unit - A component of a solar energy device that is used to store solar generated electricity or heat for later use.

E. **General standards** - All solar energy systems shall comply with the following standards.

1. Interconnection agreement - All electric solar energy systems that are connected to the electric distribution or transmission system through the existing service of the primary use on the site shall obtain an interconnection agreement with the electric utility in whose service territory the system is located. Solar energy systems connected directly to the distribution or transmission system must obtain an interconnection agreement with the interconnecting electric utility. Off-grid systems are exempt from this requirement.
2. UL listing - Electric solar system components that are connected to a building electric system must have an Underwriters Laboratory (UL) listing.
3. Electric code - All solar installations must comply with the Maryland and National Electric Code.
4. Building code - All rooftop solar systems shall comply with the Maryland Building Code.
5. Plumbing Code - Solar thermal hot water systems shall comply with applicable Maryland Plumbing Code requirements.
6. Reflectors - All solar energy systems using a reflector to enhance solar production shall minimize glare from the reflector affecting adjacent or nearby properties. Measures to minimize glare include selective placement of the system, screening on the north side of the solar array, modifying the orientation of the system, reducing use of the reflector system, or other remedies that limit glare.
7. Height limit - Building- or roof- mounted solar systems shall not exceed the maximum allowed height in any zoning district. For purposes of height measurement, solar systems other than building-integrated systems shall be considered to be mechanical devices and are restricted

consistent with other building-mounted mechanical devices for the zoning district in which the system is being installed, except that solar energy systems shall not be required to be screened.

8. Visibility, commercial installations - Commercial rooftop systems shall be placed on the roof to limit visibility from the public right-of-way or to blend into the roof design, provided that minimizing visibility still allows the property owner to reasonably capture solar energy.

F. **Standards for specific solar uses.** The following standards apply to specific types of solar uses:

1. Rooftop solar energy systems - accessory to the primary land use, designed to supply energy for the primary use.
 - a) These systems are permitted accessory uses in all districts in which buildings are permitted.
 - b) No land use permit is required.
2. Ground-mount solar energy systems – accessory to the primary land use, designed to supply energy for the primary use.
 - a) Ground-mount systems are permitted accessory uses in all districts where buildings are permitted.
 - b) Ground-mount systems require a land use permit and are subject to the accessory use standards for the district in which it is located, including setback, height, and coverage limits.
 - c) The collector surface of a ground-mount system and any foundation, compacted soil, or other component of the solar installation that rests on the ground is considered impervious surface. Vegetated ground under the collector surface can be used to mitigate stormwater runoff.
3. Community solar energy systems - Roof or ground-mount solar energy systems, may be either accessory or primary use, designed to supply energy for off-site uses on the distribution grid.
 - a) Rooftop community systems are permitted in all districts where buildings are permitted.
 - b) Ground-mount community solar energy systems are allowed by Special Exception in all districts.
 - c) An interconnection agreement must be completed with the electric utility in whose service territory the system is located.
 - d) All structures must comply with setback, height, and coverage limitations for the district in which the system is located.
 - e) Ground-mount systems must comply with all required standards for structures in the district in which the system is located.
4. Solar farms - Ground-mount solar energy arrays that are the primary use on the lot, designed for providing energy to off-site uses or export to the wholesale market.
 - a) Special Exception - Solar farms require a Special Exception approval from the Friendsville Board of Zoning Appeals.
 - b) Stormwater and National Pollutant Discharge Eliminations System (NPDES) - Solar farms are subject to the County's stormwater management and erosion and sediment control provisions and NPDES permit requirements.
 - c) Foundations - A qualified engineer shall certify that the foundation and design of the solar panels racking and support is within accepted professional standards, given local soil and climate conditions.
 - d) Other standards and codes - All solar farms shall be in compliance with all applicable local, state and federal regulatory codes.
 - e) Power and communication lines - Power and communication lines running between banks of solar panels and to nearby electric substations or interconnections with buildings shall be buried underground. Exemptions may be granted by the Friendsville Planning and Zoning Commission in instances where shallow bedrock, water courses, or other elements of the natural landscape interfere with the ability to bury lines, or distance makes undergrounding infeasible, at the discretion of the zoning administrator.
